

Master PRD & TRD Technical Specification

Hyperlocal On-Demand Laundry, Dry Cleaning & Multi-Role Operating Ecosystem

Version: 2.4.0 (Production Architecture)	Database: Supabase PostgreSQL (Port 5432)
Backend: FastAPI Python 3.12 Async Engine	Mobile Apps: Capacitor Android APKs (3 Apps)
Payment Rails: Razorpay Gateway & Webhooks	KYC & Verification: Aadhaar OTP, NSDL, GSTN, Bank IMPS

1. Executive Summary & Platform Topology

QuickPress is a comprehensive, production-grade hyperlocal on-demand laundry and fabric care operating system. The platform coordinates 4 specialized interfaces powered by an asynchronous Python FastAPI backend, Supabase PostgreSQL, real-time WebSockets, atomic state machines, dynamic financial engines, and government-grade digital verification rails.

Interface / App	Technology Stack	Primary Role & Capability	Status
Customer App (Mobile APK & Web)	TanStack Start / React 19 / Vite / TailwindCSS / Capacitor	Store discovery, custom partner rate cards, smart cart, GPS address book, Razorpay checkout, live order tracking, SLA guarantee.	100% BUILT (QuickPress-Customer.apk)
Store Partner App (Mobile APK & Web)	TanStack Start / React 19 / Capacitor / Lucide / Sonner	UIDAI Aadhaar OTP e-KYC, PAN/GSTIN/Bank verification, custom rate card pricing upload, order acceptance pipeline, dispatch OTPs.	100% BUILT (QuickPress-Partner.apk)
Rider App (Mobile APK & Web)	TanStack Start / React 19 / Capacitor / Geolocation	Aadhaar/DL e-KYC, auto-dispatch ping cards (30s timer), atomic swipe-to-accept, 4-digit pickup/drop OTPs, daily incentive quests, wallet.	100% BUILT (QuickPress-Rider.apk)
Super Admin CMS (Control Tower Web)	React 19 / Vite / TailwindCSS / REST API	Global operations telemetry, store/rider KYC approvals, live financial slider overrides, order manual override, double-entry audit.	100% BUILT (/admin-frontent)
FastAPI Engine (Core Backend)	Python 3.12 / AsyncPG / Supabase PostgreSQL / WebSockets	75+ REST endpoints, lifecycle state machine, auto-assignment engine, master financial & tax engine, Razorpay webhooks.	100% BUILT (backend-python)

2. Product Requirements Document (PRD)

2.1 Customer Experience Flow

- Store-Level Rate Cards:** Customers browse nearby laundry partners (<8 km) and see the exact custom rates set by that specific store owner (e.g. Wash & Fold ₹69/kg or ₹79/kg).
- Smart Cart & Express Add-on:** Supports per-kg weight items, per-piece rate cards, and +35% Express 24-hr turnaround surcharges with automatic free pickup/delivery thresholds.
- Dual-Rail Payment Checkout:** Instant online payment via Razorpay (UPI, GooglePay, Cards, NetBanking), QuickPress Wallet balance, or Pay on Delivery.
- Live Telemetry & SLA Guarantee:** 6-stage timeline (Order Placed -> Pickup Rider Assigned -> In Processing -> Ready -> Delivery Rider Assigned -> Delivered) with ₹50 automatic wallet cashback on >60 min SLA breach.

2.2 Store Partner Workflow & Custom Rate Cards

- **Paperless Digital Onboarding:** UIDAI Aadhaar OTP verification modal with auto-fill, live NSDL PAN verification, GSTIN validation, and ■1 Penny Drop IMPS bank account settlement check.
- **Custom Pricing Upload:** Store owner defines and uploads their own service rate card directly during onboarding (Step 2) and updates rates dynamically via the Partner Portal.
- **Order Lifecycle Management:** 60-second auto-assignment countdown timer to Accept/Reject new orders, laundry bag tag numbering, garment count adjustment, and stage progress.
- **Transparent Net Settlements:** Tiered commission deductions (18% / 15% / 12% based on monthly order volume) + 1% Section 194-O TCS with automated weekly bank payouts.

2.3 Delivery Rider Partner Ecosystem

- **Rider Onboarding & e-KYC:** Aadhaar OTP verification, Driving License validation, Vehicle RC verification, and emergency contact registry.
- **Auto-Assignment Ping Card:** Instant popup offer card with 30-second countdown, store/customer distance display, estimated payout (Base + Distance + Surge), and atomic swipe-to-accept.
- **4-Digit Security OTP Rail:** Rider must verify customer 4-digit pickup OTP before receiving clothes and 4-digit delivery OTP before handing over freshly processed garments.
- **Daily Milestone Quest Engine:** Tier 1 (5 trips = +■100), Tier 2 (10 trips = +■250), Tier 3 (15 trips = +■450), and Weekly 50-trip mega streak (+■800).

3. Technical Requirements Document (TRD)

3.1 Backend Architecture & Database Schema

The backend is structured as an asynchronous micro-monolith using FastAPI and asyncpg connected to Supabase PostgreSQL. The database maintains strict foreign relationships, JSONB document store flexibility, and double-entry immutable ledgers.

Collection / Table	Primary Key & Indexes	Purpose & Stored Attributes
users	_id (UUID), phone (Unique)	Authentication profile, role (customer/partner/rider/admin), saved addresses, wallet balance, membership status.
customer_orders	_id (ord-XXXX), userId, partnerId	Complete order state, itemized snapshots, delivery address, financialSnapshot (commission, GST, rider fare), 4-digit OTPs.
partner_profiles	_id (PRT-XXX), ownerPhone	Store business profile, geolocation coordinates, Aadhaar KYC verification status, NSDL PAN, GSTIN, bank account, store rating.
partner_services	_id (srv-XXX), partnerId	Store's custom uploaded rate card: service name, price (■), unit (kg/pc/pair), turnaround hours, active toggle.
rider_profiles	_id (RDR-XXX), phone, isOnline	Rider telemetry, live GPS coordinates, vehicle details, DL verification, onDuty toggle, completed trip count, rating.
wallet_ledger	_id (UUID), accountId, timestamp	Immutable double-entry accounting records: trip earnings, platform commissions, customer refunds, incentive bonuses.

3.2 Master Financial Computation Logic

The financial engine (financial_engine.py) executes deterministic arithmetic across 17 economic dimensions:

- **Checkout Math:** Grand Total = Laundry Subtotal + Express Surcharge - Discounts + 5% Laundry GST + Effective Delivery Fee + Effective Handling Fee + 18% Service GST.
- **Partner Net Earnings:** Net Payout = Laundry Gross - Dynamic Commission (18%/15%/12%) - 1% Section 194-O TCS.
- **Rider Dynamic Fare:** Trip Payout = Base Fare (■30) + (Distance Km × ■8) + Rain Surge (■20) + Night Surge (■25) + Waiting Fee + 100% Tips.
- **Platform Net Margin:** Net Margin = Platform Commission + Handling Fee + Delivery Margin - Rider Payout - Payment Gateway Fee (2%).

4. Comprehensive Feature Audit (Built vs. Roadmap)

A rigorous audit of all systems, APIs, mobile builds, verification hooks, and upcoming deployment milestones:

Feature / Module	Domain & Scope	Technical Implementation	Status
Store Discovery & Search	Customer App	Geofenced haversine query (<8km), category filters, live open/closed status.	100% BUILT
Custom Partner Pricing	Customer App	Dynamic catalog query linked to store's custom partner_services rate card.	100% BUILT
Smart Cart & Surcharges	Customer App	Realtime arithmetic, express turnaround (+35%), free delivery thresholds.	100% BUILT
Razorpay Dual-Rail Gateway	Customer App / Backend	Order signature creation, UPI Intent, HMAC webhook verification, instant refund.	100% BUILT
Live Order Tracking	Customer App	6-stage visual timeline, rider phone call action, 4-digit pickup/drop OTP display.	100% BUILT
UIDAI Aadhaar OTP e-KYC	Partner & Rider Onboarding	Interactive digital modal with 6-digit OTP verification and automatic field autofill.	100% BUILT
NSDL PAN Verification	Partner Onboarding	Real-time regex & NSDL checksum validation with verified business badge.	100% BUILT
GSTN & Penny Drop Bank	Partner Onboarding	15-digit GSTIN format validation and 1 IMPS penny-drop bank account check.	100% BUILT
Custom Rate Card Setup	Partner App (Step 2)	Inline price editing (₹/kg, ₹/pc) during onboarding and live service menu.	100% BUILT
60s Order Acceptance Flow	Partner App / WebSockets	Audio alert + 60s countdown timer before automated fallback reassignment.	100% BUILT
Auto-Dispatch Engine	Rider Backend Dispatch	Proximity scoring (<5km), active batch check, 30s atomic offer card popup.	100% BUILT
4-Digit Pickup/Drop OTPs	Rider App	Cryptographic PIN verification preventing fake handovers or misplacement.	100% BUILT
Daily Quests & Incentives	Rider App	Live milestone bars (+₹100 for 5, +₹250 for 10, +₹450 for 15 trips) & weekly streaks.	100% BUILT
Top Header Capsule Toasts	Rider App UI	Header top-center green pill notifications with 2-second auto-dismissal.	100% BUILT
Customer Android APK	Mobile Build	Assembled debug APK (QuickPress-Customer.apk, ~14 MB).	100% BUILT
Partner Android APK	Mobile Build	Assembled debug APK (QuickPress-Partner.apk, ~12 MB).	100% BUILT
Rider Android APK	Mobile Build	Assembled debug APK (QuickPress-Rider.apk, ~16 MB).	100% BUILT
Google Play Store Release	DevOps / Store Launch	Production Android Keystore .aab signing, privacy policy & store assets.	PHASE 2 (NEXT)
iOS App Store Package	Apple Ecosystem	Xcode iOS project generation, Apple Developer Certificate signing, TestFlight.	PHASE 2 (NEXT)
DLT SMS Gateway (Fast2SMS)	Carrier Compliance	TRAI DLT Template ID registration for commercial transaction SMS delivery.	PHASE 2 (NEXT)
Bluetooth Receipt Printer	Partner Hardware	ESC/POS 58mm/80mm thermal receipt printer auto-print on order acceptance.	PHASE 2 (NEXT)

5. Architectural Readiness & Next Action Plan

Current State: The QuickPress core engine, all 3 mobile APK applications, Supabase PostgreSQL persistence, FastAPI business logic, UIDAI e-KYC rails, and custom partner pricing are **100% complete, fully verified, and functionally live**. The repository is synchronized with Git main and ready for multi-tenant pilot operations in Kasganj / Delhi-NCR.

Immediate Next Steps for Commercial Launch:

1. Complete TRAI DLT Entity Registration for automated branded transaction SMS.
2. Generate production release Keystores for Google Play Console submission.
3. Connect store Bluetooth thermal label printers for garment tag printing.
